

Affidavits of HPV Vaccine Harms: Common Law Court, Manchester - Sunday 1st Sept 2019

Professor Christopher Exley PhD FRSB, received 27th August 2019: *'The HPV vaccine has never been safety tested in humans and its only proven efficacy is in harming recipients. Until proper safety tests have been completed there should be a world-wide moratorium on its use'*. (Universally referred to as: 'Mr Aluminium', due to his extensive research into all aspects of aluminium for over 35 years).

Amanda Dew, Mother of Brodie, received 28th August 2019,: *Since the HPV vaccine, Brodie, a sporty, academic teenager has had over 70 seizures: constant fatigue, headaches, memory problems, sky-high auto-antibodies. Normal Life is a challenge. She is one of many. We are told it's just a coincidence, yet not one test is done to rule out the vaccine.*

Dr Gayle DeLong, received 25th August 2019: *The HPV vaccine is associated with lowered birth rates. In a statistical analysis of U.S. women aged 25 to 29, I found that approximately 60% of women who did not receive the HPV vaccine had been pregnant at least once, whereas only 35% of women who were exposed to the vaccine had conceived. (DeLong, "A lowered probability of pregnancy in females in the USA aged 25 to 29 who received a human papillomavirus (HPV) vaccine injection", Journal of Toxicology and Environmental Health, 2018). Some of the vaccine's ingredients - including aluminum and polysorbate 80 - have been linked to infertility.*

Kathleen Berrett, received on 22nd August 2019: *To whom it may concern - Colton Berretts happy healthy life was catastrophically destroyed neurologically due to Gardasil at 13 years old. He became paralyzed from the neck down and ventilator dependent through a tracheostomy. He diligently fought to recover for 3.5 years spending countless hours at therapy and doctor appointments. As a senior in high school just 2 months prior to turning 18, he chose to remove himself from the need of his ventilator (ball and chain) and 100% daily constant care. We mourned the loss of our sons physical health while he was alive and now we will grieve for the rest of our lives due to the Gardasil vaccine. Thanks for sharing our tragic story and helping to inform others. We need to get this vaccine that has been fraudulently made and put on the market for no other reason than greed and money. They know it's killing and maiming our innocent children yet in the USA Merck has no liability for their product.*

Mary Holland received by email on 23rd August 2019: *I co-authored the 2018 book The HPV Vaccine on Trial. HPV vaccine clinical trials were fatally flawed, and the vaccine's pervasive harms are directly linked to those flaws. The vaccine is on trial for fraud and reckless endangerment around the world. Mary Holland, Vice-Chair, Children's Health Defense, USA*

Tony Wild, former MLC (Member of the Legislation Council), Isle of Man Government. Received 14th Dec 2018, in an email to David Ashford, Health Minister: *'If Courtenay is correct then there is a major scandal to unfold. So David please tell Courtenay to shut up or commence legal proceedings against'*.

Professor Christopher Exley PhD FRSB, received 28th August 2019: *While we have had the opportunity to test and publish data on the aluminium adjuvants, AlHyrogel and AdjuPhos, Merck has consistently refused to send us their proprietary adjuvant, aluminium hydroxyphosphatesulphate (sometimes abbreviated to AAHS) for similar testing. What is it that Merck wishes to hide?*

Dr Loretta Bolgan, received 29th August 2019:

This is the synthesis of the 'Corvelva' lab tested results: *in the quality investigation of two lots of HPV vaccine, Gardasil 9 we found the following criticality: a relevant number of candidate chemical compounds all with known biological activity and in non-residual amount who represented only for 22% of the total contaminations: three of these candidates were confirmed with the use of certified*

standard controls and with the interlaboratory analysis; in particular of great relevance is the compound APDB, an illegal amphetamine. We could identify only 7 out of 9 antigens, posing a doubt on the efficacy of this vaccine. Also, the antigens bound to aluminium form an insoluble precipitate with prion-like characteristics that are under investigation right now. We confirmed the contamination of L1 fragments of the papilloma virus strains as previously published from Prof. Sin Hang Lee, and also the contamination with adventitious viruses and human, and mouse, DNA.

Emily Tarsell, LCPC, LCPAT (Maryland, US), August 26, 2019. *My statement regarding HPV vaccinations: My 20 year old daughter, Christina, had agreed to inoculations with the HPV vaccine Gardasil. She died 18 days after her third inoculation. We proved in court and the (US) government conceded that she died from Gardasil. We were deceived about the safety, efficacy and necessity for Gardasil, a vaccine she never even needed. Emily Tarsell, mother of Christina Tarsell.*

1. In the US, a suspected injury or death from a vaccine is voluntarily reported by anyone to the Vaccine Adverse Event Reporting System. There can be and often are more than one report for each case. Many people do not know to report and medical professionals and manufacturers are supposed to report adverse events following vaccination but may not. I was advised by my doctor to report Chris's death following HPV vaccination with Gardasil. I also made a FOIA (freedom of information) request for copies of all VAERS reports made regarding our case number. That is how I came to find out that Merck had filed a VAERS report stating that my daughter died from a viral infection. This was not true and at the time the autopsy report stated that cause of death was undetermined. So I challenged them by letter to tell me where they got their information. They claim the doctor reported this outcome to them. I contacted the doctor and the facility where Chris received her vaccinations and they gave me a letter in which they stated emphatically that neither the doctor nor anyone in their organization ever said that Chris died from a viral infection. Indeed at the time, cause of death was undetermined. So I wrote to Merck, sent a copy of the letter from the doctor's office and demanded that they take back the false statement they made regarding her death. They did not take back the statement but added an addendum stating something like "her mother says she did not die from a viral infection." They did not own up that they made an unsubstantiated causal statement that was erroneous and their addendum implied that a less authoritative source (mother) denied the death was due to viral infection. They never withdrew the false statement and the process for them to even add an addendum took over a year. By that time, on Merck's Worldwide Web to doctors regarding adverse events following Gardasil, Chris's death would have already been dismissed as being due to other causes. In fact, the CDC website dismissed all deaths as being due to other causes. Even now, after we won our case in the Court of Federal Claims, the FDA and CDC websites deny any deaths due to Gardasil and even say there are no serious problems following HPV vaccination.

2. Regarding a time line for a hearing in the Court of Federal Claims, it varies with each case. Some cases are thrown out quickly if there is insufficient evidence or confounding factors like getting other vaccinations concurrently with HPV vaccination or being on a medication. Such cases would not likely go forward. Then there has to be a reasonable temporal relationship between vaccination and the onset of the injury (which they judge in terms of perhaps a couple of months, not years). There is also a statute of limitations for filing a case. In the case of a death, it is two years after vaccination, and for injuries, it is three years from vaccination.

One also needs to have a logical progression of events that link the vaccination with the onset of the adverse outcome. And one has to have a medically plausible explanation as to how the vaccine could have caused the injury. This is the most difficult hurdle and involves experts. At one point, the government made an offer to settle but I would not settle. I wanted to prove that the vaccine caused Chris's death.

It took us four years before we had a hearing and along the way there were various status meetings where we had to provide documentation and reasons to justify the case going forward. The hearing is with a government appointed administrator called a Special Master (not a judge). There is no jury, no discovery. It is an administrative hearing and the only people present were the master, a government attorney, two government experts, my attorney, my two experts and me. I have detailed the hearing in Christina England's book (Shattered Dreams, The HPV Vaccine Exposed) and also to some extent in the book: The HPV Vaccine on Trial. Our hearing was two days, but it took the master a year and three months to make a decision. Despite the fact that we met our burden of proof and the government had no alternative explanation for Chris's death other than the vaccine, the master ruled against us by ignoring our evidence.

We appealed. Our appeal was accepted and the case was sent to a judge. The judge took another year plus to review our case and determined that the master had errors of law and errors of judgment. The judge determined that we had met our burden of proof. The judge sent the case back to the master to re decide based on the evidence. The master had another 3 months to review the evidence and he then ruled in our favor. This was more than 7 years after filing.

*Then the government was given six months to decide if they wanted to appeal. They let the entire 6 months pass and they did not appeal the decision which was in our favor. **Finally, after 8 years, the government conceded that Chris died from her Gardasil vaccination. They really drag out the process and try to eliminate as many claims as they possibly can.***

Norma Erickson, President; SaneVax Inc. *HPV vaccines are the consummate example of everything that can possibly go wrong with a medical intervention. There is not a shred of medical/scientific proof indicating they will prevent any type of cancer. Couple this with the fact that serious adverse events, including death, are reported after HPV vaccine administration at higher rates than any other type of vaccine. Since regular screening is still required after vaccine administration, HPV vaccines are simply additions to already overburdened healthcare budgets, These vaccines must be pulled from the market until they are scientifically proven Safe, Affordable, Necessary and Effective. Anything less is a crime against humanity.*

Dr Sherri Tenpenny, *I look forward the day when parents stop poisoning their children because they blindly follow the advice of an under-informed "authority figure" in a white coat. The day is approaching, through the efforts of many, when adults will be more fearful of what is coming through that needle and the potential consequences of a life time of poor health and medical travesties than they are of a fever, a rash, a cough and diarrhea - the core symptoms of childhood diseases. - Dr Sherri Tenpenny, founder Vaxxter.com, HPV concerns: <https://vimeo.com/313117294>*
